

Vulnerability Scan Report

Brought to you by Codesealer

The table below shows the numbers of issues identified in different categories. Issues are classified according to severity as High, Medium, Low or Information. This reflects the likely impact of each issue for a typical organization.

	Number of vulnerabilities
High	4
Medium	-
Low	4
Information	14

The higher the severity level, the larger the impact is likely to be if an attacker is able to exploit this vulnerability.

A high number of visible APIs and third-party software both increase the attack surface of a website, exposing more potential vulnerabilities for attackers to exploit.

Visible APIs	3rd party software
101	125

More than 1 high risk	More than 3 medium risk	Only low and information risk
Your site faces multiple high-risk vulnerabilities. Immediate action is advised to prevent potential breaches.	Several medium-risk vulnerabilities have been identified. Consider protective measures to enhance security.	Your site has only low-risk vulnerabilities, indicating better-than-average security. Stay vigilant to maintain this level of safety.
